NODEFOX · ILLUSTRATIVE OPERATIONAL OUTPUT

Financial close reconciliation

Synthetic sample for workflow evaluation. No live system was accessed and no operational action was performed.

Prepared result

RC-110 · reconciliation package

Proposed adjustment: $150 fee

Unexplained difference: $0

Evidence and sign-off attached

Source records

- Reconciliation RC-110 · October
- Ledger balance: $124,800
- Statement balance: $124,650
- Difference: $150

Reference context

- Ledger fee entry: absent
- Statement fee: $150
- Other transactions matched

Validation

- 124,800 − 124,650 = 150
- Difference equals documented fee
- Adjustment requires review

Human decision

- Controller reviews fee evidence
- Approve proposed adjustment
- Posting remains separately authorized

Execution evidence

Input → AI interpretation → reference lookup → exact validation → human decision → prepared output.

This website fixture demonstrates the proposed output structure. It is not a native NodeFox audit export, a customer outcome or a legal determination. Recorded-state inspection does not repeat model calls or external writes.
