NODEFOX · ILLUSTRATIVE OPERATIONAL OUTPUT

Operational investigation

Synthetic sample for workflow evaluation. No live system was accessed and no operational action was performed.

Prepared result

IN-530 · investigation report

Supported recommendation: $620

Sources: order, shipment, credit log

Decision and execution history linked

Source records

- Investigation IN-530 · disputed credit
- Order SO-301 · $6,200
- Customer reports 4 missing units
- Credit request: $620

Reference context

- Order: 40 units at $155
- Shipment: 36 delivered
- Credit ledger: no prior credit

Validation

- 40 − 36 = 4 missing units
- 4 × $155 = $620 supported
- Duplicate-credit check passed

Human decision

- Reviewer sees evidence and arithmetic
- Approve credit recommendation
- Finance retains posting authority

Execution evidence

Input → AI interpretation → reference lookup → exact validation → human decision → prepared output.

This website fixture demonstrates the proposed output structure. It is not a native NodeFox audit export, a customer outcome or a legal determination. Recorded-state inspection does not repeat model calls or external writes.
