NODEFOX · ILLUSTRATIVE OPERATIONAL OUTPUT

Order processing

Synthetic sample for workflow evaluation. No live system was accessed and no operational action was performed.

Prepared result

SO-8126 · approved order

80 filters + 20 valves

Order value: $5,320

Price decision linked to order

Source records

- PO-5824 · Acorn Industrial
- Line 1: 80 filters at $42
- Line 2: 20 valves at $95
- Requested ship date: Nov 12

Reference context

- Filters: 120 available; price $42
- Valves: 30 available; price $98
- Account: active; credit cleared

Validation

- Filter line matches: $3,360
- Valve price differs by $3
- Hold discrepant line for decision

Human decision

- Order desk sees contract evidence
- Approve current valve price: $98
- Release both authorized lines

Execution evidence

Input → AI interpretation → reference lookup → exact validation → human decision → prepared output.

This website fixture demonstrates the proposed output structure. It is not a native NodeFox audit export, a customer outcome or a legal determination. Recorded-state inspection does not repeat model calls or external writes.
